

November 2010

Dear Pyrodigital and Show Director Users

In case we did not get a chance to meet with you or you were unable to attend the International Symposium on Fireworks in Porto, we would like to update you on new products and releases.

In the Symposium we announced the new collaboration between Pyrodigital, PyroStudios Asia and Infinity Visions to bring to our users an authorized and reliable wireless interface for the Pyrodigital system.

Per discussions and request from various users we are also now offering new software support services.

**New Products and ...****PyroStudios Wireless Network Interface and Intelligent Splitter**

The wireless XLR interface is Pyrodigital authorized and fully compatible with your existing PD Field Controller and PD Firing Modules and can be used in combination with a cable network.

The Intelligent Splitter is the perfect solution to isolate shorts and maintain the continuity of the rest of the network. You can find complete information in the [USERS GUIDE](#).

We are now taking orders. Please contact us for more information.

**Immediate availability for
Dec 2010
Jan 2011**

Base Interface and Antenna:	\$1,495.00
Remote Interface and Antenna:	\$1,295.00
Battery Pack w/cord w/battery:	\$585.00
Speakon Cable:	\$65.00
Intelligent Splitter:	\$999.00

and DON'T MISS The new features of !

PyroCreator 4D
Fireworks 3D Animation for Everyone!
www.pyrocreator.com

The most intuitive pyrotechnic design software ever. You can easily create your pyrotechnic shows with many different effects and combinations of effects in Google Sketchup 3D Warehouse models.

The PD Firing Module Reader

Designed to allow a safe and user friendly method of determining the condition / state of a PD firing module. It will locate the address setting and show the status of the pins that are connected to the module being tested.

PORTABLE TESTING

Compact, lightweight and capable of one handed operation makes it ideal for quick determination of a firing module's condition in the field. It is the perfect device to test Firing Modules and igniters connections in remote site locations, without the need of carrying or using a PD Field Controller. The operator can check immediately and easily the installation after the wiring work is finished. It will also allow an estimation of a module's health by measuring the amount of power that is being consumed. This makes it an indispensable tool in the shop for maintenance and assessment of your equipment.

SAFE OPERATION

There is built in current limiting on the outputs going to the module under test to limit the accidental discharge of igniters for first fault conditions. It is powered by an easily replaceable and widely available 9V battery.

SCRIPTS DOWNLOAD

In addition to testing firing modules individually, the reader is also capable of containing the firing scripts of up to 8 tables of 2500 cues for comparison, viewing and loading into PD Field Controllers. These scripts can be downloaded with Show Director / Visual Show Director from a computer or uploaded from a PD Field Controller in to the reader. The utility of loading the scripts allows multiple larger scripts to be loaded into the reader and then later downloaded in the field in addition to a computer
